Summary: Consumer and business confidence remained strong in Nebraska during July but fell from June levels. The Consumer Confidence Index – Nebraska (CCI-N) stood at 102.5 in July after a reading of 104.7 during June. Despite the decline of 2.2, the CCI-N remained above the neutral value of 100.0, indicating strong consumer confidence. The outlook of Nebraska businesses also was strong. The Business Confidence Index – Nebraska (BCI-N) fell to 105.1 in July from 109.2 in June. The BCI-N remained well above the neutral value in July, despite the 4.1 point decline, which indicates that business confidence is also strong in Nebraska. When asked about the most important issue facing their business, customer demand was mentioned by 34 percent of business respondents. Concerns about customer demand were most common in the agriculture and health care industries. Businesses also faced strong competition in both the labor and product markets. The availability and quality of labor was mentioned as the most important issue by 21 percent of respondents while 10 percent mentioned competition from other businesses. Households reported a variety of financial concerns with 56 percent choosing the cost of living including health care costs, taxes, major expenses (furniture, appliances, automobiles or college tuition) and the general cost of living. For the second consecutive month, the primary concern was the cost of health care and health care insurance. Twenty percent of households also reported that their primary financial issues relate to paying off debt or savings.

Consumer Confidence Index - Nebraska

The Consumer Confidence Index – Nebraska (CCI-N) summarizes responses to the Survey of Nebraska Households regarding the household financial situation and the environment for making a major household purchase. Respondents provide their assessment of both current conditions and expectations for the next 6 months. The Survey of Nebraska Households is sent to 500 households each month. The survey asks respondents whether: 1) their household is better off financially now than it was six months ago 2) they expect their household to be better off financially in six months, 3) they believe now is a good time to make a major household purchase (automobile, appliance, or electronics) and 4) they expect it will be a good time to make a major household purchase 6 months in the future. The survey also asks a fifth question “What is the most important financial issue facing your household today?” Individual responses to that question fall into eleven categories. In July, responses were received from 142 of the 500 surveyed households, for a 28 percent response rate.
The Consumer Confidence Index – Nebraska is estimated based on responses to the first four questions. For each question, the share of respondents indicating that they are worse off (or that it is a bad time to make a major household purchase) is subtracted from the percentage who indicate they are better off (or that it is a good time to make a purchase). The number 100 is added to the difference in percentages. A value of 100, therefore, indicates that households are neutral, since a value of 100 would only arise if the same share of households declare that they are better off as declare that they are worse off. A value above 100 indicates strong consumer confidence. A value below 100 indicates weak consumer confidence.

The Consumer Confidence Index – Nebraska is the average of the values for the four questions. Therefore, a value over 100 for the CCI-N indicates strong consumer confidence.

As seen in Table 1, the Consumer Confidence Index – Nebraska had a value of 102.5 in July 2017. This value is well above the neutral value of 100.0 and indicates that consumer confidence is strong in the state. The value of the index fell by 2.2 points from 104.7 in June.

Figure 1 shows household responses to the question about the most important financial issue they face. The most common issues raised in July responses were the cost of health care and insurance (19 percent) and the general cost of living (16 percent). Overall, 56 percent of respondents chose some type of cost factor as their top issue, whether the cost of health care, the general cost of living, taxes (11 percent), or major expenses (10 percent). Twenty percent of respondents choose paying off debt (15 percent) or savings (5 percent) as their top issue. Among other responses, 9 percent chose their level of wages or income as their top issue and 8 percent choose concerns about their job or business. The share of households concerned about major expenses rose compared to previous months but otherwise responses were similar.
Figure 1: Most Important Financial Issue Facing Nebraska Households, July 2017

- Taxes: 11%
- Paying Off Debt: 15%
- Saving: 5%
- Social Security/Medicare: 0%
- Level of Wages/Income: 9%
- Cost of Health Care/Insurance: 19%
- Concerns with Employment/Business: 8%
- Cost of Living: 16%
- Major Expense: 10%
- Financial Market Performance: 2%
- Other: 3%

**Survey of Nebraska Business**

The Business Confidence Index – Nebraska (BCI-N) summarizes responses to the *Survey of Nebraska Business* regarding business sales and employment. Respondents provide their assessment of both recent employment and sales growth and expectations for the next 6 months. The *Survey of Nebraska Business* is sent to 500 Nebraska business establishments each month. The survey asks respondents whether: 1) the dollar sales volume at their business was higher, lower, or about the same as it was over the previous 6 months 2) the dollar sales volume at their business will be higher, lower, or about the same over the next 6 months, 3) the total number of employees and at their business increased, decreased or stayed the same over the last 6 months and 4) the total number of employees at their business will increase, decrease, or stay the same over the next 6 months. The survey also asks “What is the most important issue facing your business today?” Individual responses to that question fall into one dozen categories of business and public policy issues. Surveyed businesses are randomly selected from all industries, including agriculture. Businesses of all sizes are surveyed. In July, responses were received from 133 of the 500 surveyed businesses, for a 27 percent response rate.

The Business Confidence Index – Nebraska is estimated based on responses to the first four questions. For each question, the percentage of respondents who indicate that sales or employment decreased (or will decrease) is subtracted from the percentage who indicate that sales or employment increased (or will increase). The number 100 is added to the difference in percentages. A value of 100, therefore, indicates that businesses are neutral, since a value of 100 would only arise if the same percentage of businesses declare an increase as declare a decrease. A value above 100 indicates strong business confidence. A value below 100 indicates weak business confidence.

The Business Confidence Index – Nebraska is the average of the values for the four questions. Therefore, a value over 100 for the BCI-N indicates strong business confidence. Recent values for the Business Confidence Index – Nebraska are reported in Table 2.

Source: Survey of Nebraska Business
As seen in Table 2, the Business Confidence Index – Nebraska had a value of 105.1 in July 2017. This value is well above 100 and indicates that business confidence is strong in Nebraska. The value of the index fell by 4.1 points, from 109.2 in June 2017. Business confidence retreated in July from very high levels during the first 6 months of the year.

Results in Figure 2 show the top concerns of business owners and managers responding to the July survey. Three quarters of responses were related to business operations issues such as customer demand for goods or services, labor availability and quality, competition or the cost of goods and services. Customer demand was the most common top concern, named by 34 percent of respondents. Businesses in agriculture and health care were especially likely to cite concerns with customer demand. Businesses also faced strong competition in both the labor and product markets. Twenty-one percent of respondents mentioned the quality and availability of labor as their top concern while 10 percent choose competition and a need to improve business practices. Taxes were chosen by 10 percent of respondents while government regulation was chosen by 9 percent. Health care costs were chosen by 7 percent of respondents.
